## Human Papillomavirus and Related Cancers, Fact Sheet 2017 (2017-07-27)

### I. Key data on HPV and HPV-related cancers

Cameroon has a population of 6.74 millions women ages 15 years and older who are at risk of developing cervical cancer. Current estimates indicate that every year 1993 women are diagnosed with cervical cancer and 1120 die

from the disease. Cervical cancer ranks as the 2nd most frequent cancer among women in Cameroon and the 2nd most frequent cancer among women between 15 and 44 years of age. Data is not yet available on the HPV burden in the general population of Cameroon. However, in Africa about 3.7% of women in the general population are estimated to harbour cervical HPV-16/18 infection at a given time, and 67.2% of invasive cervical cancers are attributed to HPVs 16 or 18.
