

Cameroon

Human Papillomavirus and Related Cancers, Fact Sheet 2017 (2017-04-19)

I. Key data on HPV and HPV-related cancers

Cameroon has a population of 6.74 millions women ages 15 years and older who are at risk of developing cervical cancer. Current estimates indicate that every year 1993 women are diagnosed with cervical cancer and 1120 die from the disease. Cervical cancer ranks as the 2nd most frequent cancer among women in Cameroon and the 2nd most frequent cancer among women between 15 and 44 years of age. Data is not yet available on the HPV burden in the general population of Cameroon. However, in Africa about 3.7% of women in the general population are estimated to harbour cervical HPV-16/18 infection at a given time, and 67.2% of invasive cervical cancers are attributed to HPVs 16 or 18.

Table 1. Crude incidence rates of HPV-related cancers

	Male	Female
Cervical cancer	-	19.4
Anal cancer	-	-
Vulva cancer	-	-
Vaginal cancer	-	-
Penile cancer	-	-
Pharynx (excluding nasopharynx)	2.9	0.3

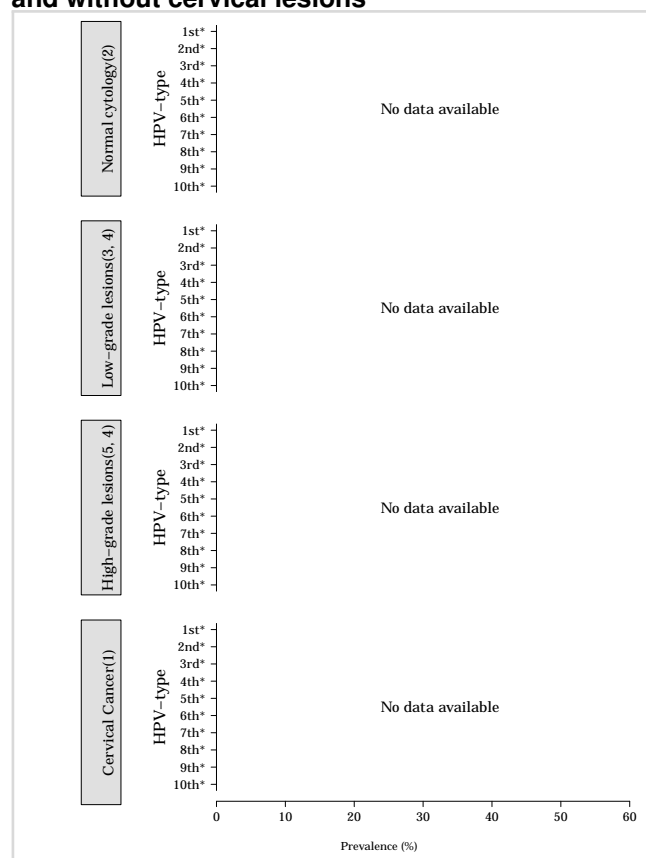

Table 2. Burden of cervical cancer

	Incidence	Mortality
Annual number of new cases/deaths	1993	1120
Crude rate	19.4	10.9
Age-standardized rate	30.0	17.5
Cumulative risk 0-74 years (%)	3.2	2.0
Ranking of cervical cancer (all years)	2nd	2nd
Ranking of cervical cancer (15-44 years)	2nd	1st

Table 3. Burden of cervical HPV infection Cameroon

	No. Tested	% (95% CI)
HPV prevalence in women with normal cytology	-	--
HPV 16/18 prevalence:		
Normal cytology	-	--
Low-grade cervical lesions	14	21.4 (7.6-47.6)
High-grade cervical lesions	-	--
Cervical cancer	-	--

Figure 1. Comparison of the ten most frequent HPV oncogenic types in Cameroon among women with and without cervical lesions

*No data available. No more types than shown were tested or were positive.

Cameroon

II. Complementary data on cervical cancer prevention

Table 4. Factors contributing to cervical cancer (co-factors)

Smoking prevalence (%), women	0.9
Total fertility rate (live births per women)	5.1
Hormonal contraception use (%) (pill, injectable or implant), among women	5.6
HIV prevalence (%), adults (15-49 years)	4.8 [4.4 - 5.1]

Table 5. Sexual behaviour

MEN	
Percentage of 15-year-old who have had sexual intercourse	11.2
Range of median age at first sexual intercourse	18.0-18.6
WOMEN	
Percentage of 15-year-old who have had sexual intercourse	15
Range of median age at first sexual intercourse	15.9-17.1

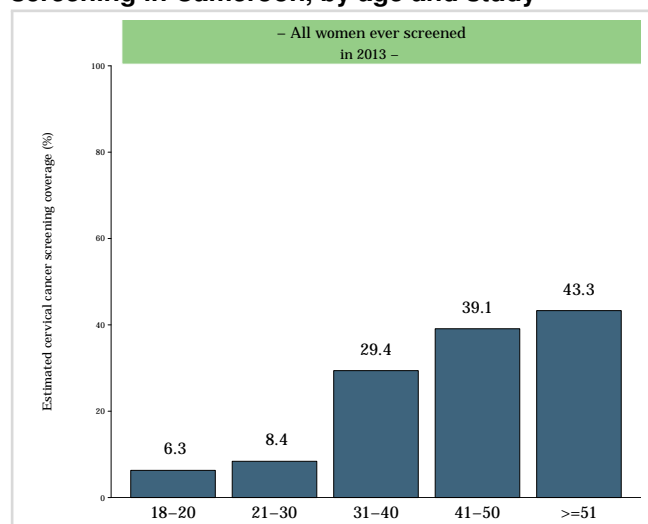

Table 6. HPV vaccine introduction

HPV vaccination programme	Pilot program
Date of HPV vaccination routine immunization programme start	-
HPV vaccination target age for routine immunization	-
Full course HPV vaccination coverage for routine immunization:	
% (calendar year)	-

Table 7. Cervical screening practices and recommendations

Cervical cancer screening coverage, % (age and screening interval, reference)	19.7% (All women aged >=18 ever screened, Ekane 2015)
Screening ages (years)	-
Screening interval (years) or frequency of screens	-

Figure 2. Estimated coverage of cervical cancer screening in Cameroon, by age and study
