Human Papillomavirus and Related Cancers, Fact Sheet 2023 (2023-03-10)

I. Key data on HPV and HPV-related cancers

Gabon has a population of 733,745 women ages 15 years and older who are at risk of developing cervical cancer. Current estimates indicate that every year 236 women are diagnosed with cervical cancer and 118 die from the disease. Cervical cancer ranks as the 2nd most frequent cancer among women in Gabon and the 2nd most frequent cancer among women between 15 and 44

years of age. Data is not yet available on the HPV burden in the general population of Gabon. However, in Africa, about 3.8% of women in the general population are estimated to harbour cervical HPV-16/18 infection at a given time, and 67.2% of invasive cervical cancers are attributed to HPVs 16 or 18.
