Human Papillomavirus and Related Cancers, Fact Sheet 2023 (2023-03-10)

I. Key data on HPV and HPV-related cancers

Mauritania has a population of 1.42 million women ages 15 years and older who are at risk of developing cervical cancer. Current estimates indicate that every year 428 women are diagnosed with cervical cancer and 286 die from the disease. Cervical cancer ranks as the 2nd most frequent cancer among women in Mauritania and the 2nd most frequent cancer among women between 15

and 44 years of age. Data is not yet available on the HPV burden in the general population of Mauritania. However, in Western Africa, the region Mauritania belongs to, about 4.3% of women in the general population are estimated to harbour cervical HPV-16/18 infection at a given time, and 55.6% of invasive cervical cancers are attributed to HPVs 16 or 18.
