

Nigeria

Human Papillomavirus and Related Cancers, Fact Sheet 2017 (2017-07-27)

I. Key data on HPV and HPV-related cancers

Nigeria has a population of 50.33 millions women ages 15 years and older who are at risk of developing cervical cancer. Current estimates indicate that every year 14089 women are diagnosed with cervical cancer and 8240 die from

the disease. Cervical cancer ranks as the 2nd most frequent cancer among women in Nigeria and the 2nd most frequent cancer among women between 15 and 44 years of age. About 3.5% of women in the general population are estimated to harbour cervical HPV-16/18 infection at a given time, and 66.9% of invasive cervical cancers are attributed to HPVs 16 or 18.

Table 1. Crude incidence rates of HPV-related cancers

	Male	Female
Cervical cancer	-	17.1
Anal cancer	-	-
Vulva cancer	-	-
Vaginal cancer	-	-
Penile cancer	0.1	-
Pharynx (excluding nasopharynx)	0.3	0.0

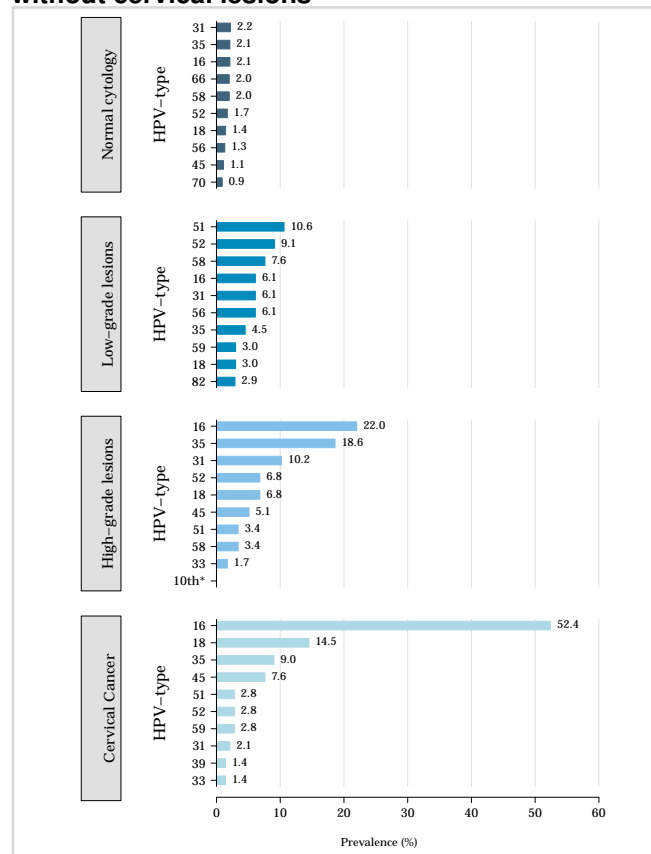

Table 2. Burden of cervical cancer

	Incidence	Mortality
Annual number of new cases/deaths	14089	8240
Crude rate	17.1	10.0
Age-standardized rate	29.0	17.5
Cumulative risk 0-74 years (%)	3.3	2.0
Ranking of cervical cancer (all years)	2nd	2nd
Ranking of cervical cancer (15-44 years)	2nd	2nd

Table 3. Burden of cervical HPV infection Nigeria

	No. Tested	% (95% CI)
HPV prevalence in women with normal cytology	2293	16.0 (14.6-17.6)
HPV 16/18 prevalence:		
Normal cytology	1919	3.5 (2.8-4.4)
Low-grade cervical lesions	66	9.1 (4.2-18.4)
High-grade cervical lesions	59	28.8 (18.8-41.4)
Cervical cancer	145	66.9 (58.9-74.0)

Figure 1. Comparison of the ten most frequent HPV oncogenic types in Nigeria among women with and without cervical lesions

*No data available. No more types than shown were tested or were positive.

Human Papillomavirus and Related Cancers, Fact Sheet 2017 (2017-07-27)

II. Complementary data on cervical cancer prevention

Table 4. Factors contributing to cervical cancer (co-factors)

Smoking prevalence (%), women	1.2 [0.5-2.1]
Total fertility rate (live births per women)	5.6
Hormonal contraception use (%) (pill, injectable or implant), among women	5.4
HIV prevalence (%), adults (15-49 years)	-

Table 5. Sexual behaviour

MEN	
Percentage of 15-year-old who have had sexual intercourse	2.9
Range of median age at first sexual intercourse	-
WOMEN	
Percentage of 15-year-old who have had sexual intercourse	15.6
Range of median age at first sexual intercourse	16.7-17.9

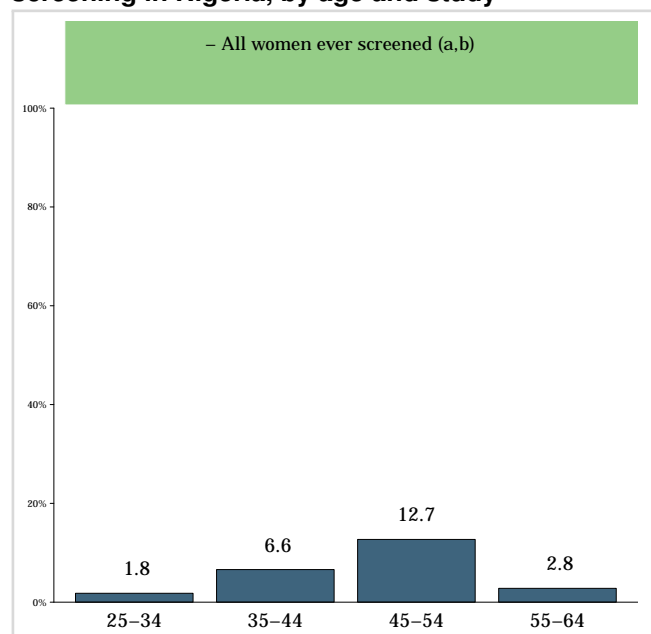

Table 6. HPV vaccine introduction

HPV vaccination programme	Pilot
Date of HPV vaccination routine immunization programme start	-

Table 7. Cervical screening practices and recommendations

Cervical cancer screening coverage, % (age and screening interval, reference)	8.7% (All women aged ≥ 18 ever screened, Ekine 2015)
Screening ages (years)	-
Screening interval (years) or frequency of screens	-

Figure 2. Estimated coverage of cervical cancer screening in Nigeria, by age and study

^a Proportion of women in the total sample of the mentioned age range in the country or region that reported having a Pap smear during a given time period (e.g., last year, last 2, 3, 5 years or ever).

^b It was not reported the year of the sample studied in the original source.
