Human Papillomavirus and Related Cancers, Fact Sheet 2017 (2017-07-27)

I. Key data on HPV and HPV-related cancers

Viet Nam has a population of 36.91 millions women ages 15 years and older who are at risk of developing cervical cancer. Current estimates indicate that every year 5146 women are diagnosed with cervical cancer and 2423 die

from the disease. Cervical cancer ranks as the 4th most frequent cancer among women in Viet Nam and the 2nd most frequent cancer among women between 15 and 44 years of age. About 2.1% of women in the general population are estimated to harbour cervical HPV-16/18 infection at a given time, and 82.8% of invasive cervical cancers are attributed to HPV types 16 or 18.
