I. Key data on HPV and HPV-related cancers

Romania has a population of 8.59 millions women ages 15 years and older who are at risk of developing cervical cancer. Current estimates indicate that every year 4343 women are diagnosed with cervical cancer and 1909 die from

the disease. Cervical cancer ranks as the 3rd most frequent cancer among women in Romania and the 2nd most frequent cancer among women between 15 and 44 years of age. Data is not yet available on the HPV burden in the general population of Romania. However, in Eastern Europe, the region Romania belongs to, about 9.7% of women in the general population are estimated to harbour cervical HPV-16/18 infection at a given time, and 84.7% of invasive cervical cancers are attributed to HPVs 16 or 18.
